

Improving the Business of Healthcare – One Specimen at a Time

LabTrack™ Solution

With tens of millions of blood, urine and body tissue tests being performed each month, today's diagnostics laboratories are busy. And as the global population ages, causing the volume of tests to grow steadily, getting accurate test results in timely fashion is one of the most important factors in helping physicians diagnose problems and treat patients.

A recent study conducted by the Mayo Clinic found that the risk and number of errors during diagnostic lab testing and analysis can be drastically reduced by instituting technology-driven specimen labeling and tracking systems.

Ambient ID's LabTrack Solution, based on advanced automatic identification tagging and tracking technology, supports the Mayo Clinic's findings and has been proven at some of the largest, busiest labs in North America.

LabTrack is a turnkey specimen tracking solution fine-tuned to deliver the highest levels of efficiency and accuracy that diagnostic labs, physicians and patients demand. Developed collaboratively with our Hospital Reference and Pathology Laboratory customers, LabTrack comprehends specific financial models, workflows and measurement metrics. The result is a system that streamlines the lab's processes resulting in fewer errors, increased

throughput and a significantly improved bottom line.

LabTrack Benefits

Unlike previous generation specimen tracking systems, LabTrack does not interfere with your existing IT system. Instead, LabTrack utilizes self-contained wireless communications technology with optimized RFID tags, readers and software to:

Track and locate every specimen in the lab workflow — where's it's been, how long it was there, who handled it, where it went, where it needs to go next.

Eliminate errors and wasteful inefficiencies that impact the lab's bottom line — no sample will ever go missing or be confused with another.

Provide sophisticated measurement tools that will yield unprecedented visibility into lab operations, improving competitiveness and profitability.

Tell you what's coming, which means it will inform your scheduling system so that you'll never overstaff or miss an opportunity.

Try LabTrack Today

Because it is a proven turnkey solution, it is remarkably easy to install and pilot with no disruption to existing operations. Contact us now to learn more.
